

[Step-by-Step Guide to Camera Ready Submission for INSPECT 2026](#)

Step 1: Log in to your Microsoft CMT portal and click “2026 International Conference on Intelligent Signal Processing and Effective Communication Technologies”.

Step 2: After revising the paper as per the reviewers’ comments, verify the IEEE format, author’s names, affiliations, superscripts, and email IDs. Then click “Create Camera Ready Submission.”

Step 3: After clicking “Create Camera Ready Submission,” the following page will appear. If you have made any changes to the title or abstract in the final paper, update them here as well.

The screenshot shows the 'Create New Camera Ready Submission' page. The top navigation bar includes 'Submissions' and 'Contact Cha'. The page title is 'Create New Camera Ready Submission'. Below the title, the 'Paper ID: 583' is displayed. The 'TITLE AND ABSTRACT' section is highlighted. The 'Title' field contains 'A Novel Feature Regularized DenseNet-121 for Cervical Spine Fracture'. The 'Abstract' field contains the following text:

Accurate fracture detection in the cervical spine (C-spine) is important for early diagnosis and treatment planning. This study proposes a novel regularization approach, which is integrated with DenseNet-121 to improve fracture detection performance on axial CT images of C-spine. As a part of preprocessing, a window operation is introduced on raw DICOM images to reduce noise and enhance image clarity, followed by conversion to JPG format for efficient model training. Several state of the art convolutional neural network models, including VGG-19, ResNet-152, and DenseNet-121, are trained and evaluated for fracture detection. While DenseNet-121

The 'AUTHORS' section is also visible, with the text 'You may add your authors'.

Step 4: Scroll down on the same page and upload the final revised paper.
